

## ***Fighting for Ethical Research - Not Unethical Experimentation***

Friday, July 15, 2005 -

---

This week the Senate is likely to take up a number of science issues, including a well-funded effort to overturn President Bush's embryonic stem cell policy. In an effort to counter the big bucks of the Bio industry while they attempt to grab from the increasingly depleted pockets of American taxpayers, FRC is providing the Senate with one-page information sheets that counter the misleading arguments heard from the other side. The topics cover the numerous cures/treatments found with ethical stem cell research compared to the failed experimentation with human embryonic stem cell research. Please contact your Senators today to support ethical stem cell research - and vote against using human embryos for experimentation.
